

Step 2: Understanding the Interface

The Ecosystem Map is organized into a grid-like format where you can filter by campus and resource type. Familiarizing yourself with the interface will enhance your navigation experience.

Columns (Campuses): The map displays a set of columns, each representing an institution or campus. These columns provide an overview of the resources available at each specific campus.

Rows (Resource): The map also consists of rows that include resources for each campus and are categorized accordingly.

Categories: Each resource is tagged across five categories to help guide users to appropriate offerings that meet their needs. The following categories are available for filtering purposes:

- **Academic Support:** Resources aimed at assisting students academically, such as tutoring services, writing centers, and academic advising.
- **Early Outreach (pre-transfer):** Resources focused on supporting students in their pre-transfer phase, including workshops, mentorship programs, and college preparation assistance.
- **Transfer Support (post-transfer):** Resources designed to aid students in their post-transfer journey, such as transfer student organizations, transfer credit evaluation services, and transfer success programs.
- **Retention Initiative:** Resources aimed at promoting student retention and success, such as mentoring programs, counseling services, and student success workshops.
- **Expanded Learning Opportunity:** Resources providing additional learning opportunities beyond traditional coursework, such as research opportunities, internships, and study abroad programs.
